

Abstract of the Disclosure

A cuvette package for loading multicell cuvettes from the package into measurement instruments having their cuvette loading accessories designed to accept known packages. On top of a row of multicell cuvettes is attached a detachable bonding strip having a width smaller than that of the width of the row of multicell cuvettes. The bonding strip serving to keep the row of cuvettes together during transport and being easily detachable when the cuvettes are being loaded into the instrument. The multicell cuvettes are loaded into the instrument from the dispensing device which supports the cuvette in place and has its top surface provided with an opening permitting the removal of the strip by pulling off from the supported multicell cuvette package.
